# FYLDE MICRO

Regional Control Interface

The Regional Control Processor is used to connect together up to 10 sites to form a regional coverage network. The RCP performs all the Inter-site call set-up management tasks including PSTN, PABX's and hard wired dispatchers (MHD).

Single Site Interconnect option (SSIU)

The (SSIU) is a low cost cut down version of the RCP allowing connection of a site to the PSTN or PABX. Also available ports to attach an MHD and the system control terminal are included.

Single Site Kit with Telephone Interconnect

SSTAK01 is an SSIU and 2U PCM switch combination making a cost-effective solution for telephone connection on single site systems.

From each radio site speech and data is sent using multiple link technology.

Supported Link Options - Traditional 2/4 wire - 64 Kbit. - Microwave links - Digital UHF radio links - T1 / E1
